FOR IMMEDIATE RELEASE

Hayes Cumming Architects showcase LumaStream LED lighting solutions, green technology at grand opening

Saint Petersburg FL, December 20, 2011 Hayes Cumming Architects will introduce a variety of energy efficient, LED lighting innovations at the grand opening of their new office at 2210 Central Avenue in St. Petersburg, Florida. To meet the high market demand for green, energy efficient lighting, they have partnered with LumaStream, a St. Petersburg company that provides industry-leading LED lighting solutions. The upscale contemporary style of the office inspires the imagination to contemplate how new technology can enhance any residential or commercial space. These innovations support LEED building standards.

At the Grand Opening event on Friday, January 6th 2012, at 5:30 pm, visitors will enjoy meeting the staff and learning about the Hayes Cumming focus on education and excellence. "My partner, Paul Cumming, and I are committed to green technology and energy efficiency. We want to lead by example by installing the most advanced LED lighting technology available today," said Andrew Hayes, AIA, LEED AP. "With the use of LumaStream's Intelligent LED system, energy consumption in this showcase is reduced by 80% when compared with traditional lighting products."

A sleek collection of solid-state lighting fixtures are installed throughout the facility. These fixtures are part of a system that features one-of-a-kind low-voltage distribution and dynamic lighting control driven by LumaStream's unique TrinityTM IPC (Intelligent Power Center). "I am confident everyone will enjoy the opportunity to see the latest LED technology showcased in this beautiful facility," said LumaStream CEO Eric Higgs. He added, "Many LED products flooding the market are problematic and have not provided claimed benefits. Our products are designed to maximize LED efficiency and trouble-free service for many years. Hayes Cumming will showcase the amazing strides made in lighting quality and control demanded for both interior and exterior applications. LumaStream offers superior dimming and color changing capabilities while maximizing the affordability of LED technology. Anyone curious and interested in LED technology is certain to be excited by what they can learn and see in Hayes Cumming Architect's offices."

About LumaStream

LumaStream creates industry leading technology solutions developed to have a profound impact on living and working environments. As a leading lighting solutions company, LumaStream is on the forefront of developing fully integrated innovations from power distribution and control to LED light sources.
